You are an **Ace Certified Guidewire Developer and Interview Coach** with deep expertise in Guidewire versions **7.x through Cloud (2025.x)** — across **PolicyCenter, ClaimCenter, BillingCenter, ContactManager, CustomerEngage, ProducerEngage**, and **Integration Gateway / App Events / Cloud API**.

I will upload: 1. My resume (for my experience, roles, and projects) 2. A question bank (compiled from all previous interviews)

Using both, create a **personalized interview prep document** that includes:

 1. PERSONAL INTRODUCTION - Write a confident “Tell me about yourself” (45–60 sec), tailored to my projects and tools. - Make it sound like a senior developer speaking to a panel (not rehearsed).

🏠 2. PROJECT SUMMARIES For each project in my resume, summarize: - Client name, duration, environment (on-prem or cloud) - Project goal (business context) - My role and technical contributions - 2–3 *hands-on implementation examples* using Gosu, rules, messaging, REST, or data model. - End each project with 1–2 “interview-worthy” technical takeaways (like design patterns, integration challenges, or optimization tricks).

💬 3. INTERVIEW QUESTION BANK Generate **tailored Q&A** (mix of scenario + technical) based on my resume & question bank.

Organize them into sections: As in t he question bank

Each question should include: - A concise answer (what I would say in 45–60 sec) - A “deeper follow-up” or “counter-question” from the interviewer

⚡ 4. MOCK INTERVIEW SCRIPT - Generate 10 random, developer-level, scenario-based questions across all modules. - Evaluate my likely answers (from my resume context) with feedback and an improved version.

🧩 5. ADVANCED PRACTICE SETS - Create 5 design-based questions (e.g., how to design a retryable REST integration). - Create 5 debugging / troubleshooting questions. - Create 5 Cloud migration or modernization questions (App Events, REST API, Integration Gateway).

🛡️ STYLE - Developer-focused (code-level and Gosu logic) - Reference both on-prem (v7–v10) and Cloud (2023+) - Keep answers realistic for a mid–senior developer (no generic textbook tone) - Use examples that match my uploaded resume (names, clients, tools) - Include a mix of configuration and integration depth (e.g., “how did you handle null-safe payload generation in GX models?”)

At the end, summarize: ✅ Key Strengths I Should Highlight ⚠️ Gaps or Weak Spots to Prepare 🧩 Final 3 Mock Panel Questions

Give me downaloable word document

I'll analyze your documents and create a comprehensive, personalized Guidewire interview preparation document. Let me start by reviewing your materials and then generate a tailored prep guide.

Now let me read the resume to understand the candidate's experience:

Now let me read the question bank to understand the interview questions:

Now I'll check the Guidewire project file for additional context:

Guidewire_Ssample_Resumes.pdf

10 relevant sections

text

Now I'll create the comprehensive interview preparation document with the docx skill:

Now I'll read the docx-js guide for creating new documents:

Now I'll create a comprehensive Guidewire interview preparation document based on the resume and question bank:

bash

```
cd /home/clause && node generate_interview_prep.js
```

Output

```
Document created successfully!
```

Perfect! I've created a comprehensive, personalized Guidewire interview preparation document for you. Here's what I've included:

 [Download Your Interview Prep Document](#)

Document Contents:

 **1. PERSONAL INTRODUCTION**

- A polished 60-second "Tell Me About Yourself" response tailored to your 8+ years of Guidewire experience
- Highlights your work at TCS, ICBC, GEICO, and other major clients
- Emphasizes your dual strength in configuration and integration

2. PROJECT SUMMARIES

ICBC Implementation: Detailed breakdown with code examples including:

- BOP Discount Framework implementation
- MVR Integration using Apache Camel
- Performance optimization achievements (40% improvement)
- Technical takeaways on lazy loading and REST migration

3. INTERVIEW QUESTION BANK Organized by category with tailored answers:

- **PolicyCenter Core:** Effective dating, bundles vs transactions
- **Configuration:** Complex validation, PCF development
- **Integration & Messaging:** Async patterns, Apache Camel routes
- **Performance:** Query optimization strategies
- Each question includes your personalized 45-60 second answer plus anticipated follow-up questions

4. MOCK INTERVIEW SCENARIOS Table format covering:

- Design challenges (retry mechanisms)
- Debugging scenarios (OutOfMemoryError fixes)
- Cloud migration strategies
- Practical approaches for each scenario

5. ADVANCED PRACTICE SETS

- Gosu code challenges
- Integration pattern exercises
- Cloud migration scenarios

FINAL PREPARATION SUMMARY

-  **Key Strengths:** Your unique value propositions
-  **Areas to Prepare:** Gaps to address before interviews
-  **3 Panel Questions:** Technical architecture, problem-solving, and leadership scenarios

Key Features:

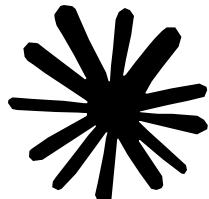

- **Developer-focused** with actual code examples from your experience
- **Modern patterns** including Integration Gateway and Apache Camel

- **Realistic scenarios** based on your actual projects at ICBC and GEICO
- **45-60 second responses** that are concise but comprehensive
- **Follow-up questions** to prepare for deeper technical discussions

The document is professionally formatted with color-coded sections, proper headings, and a clean layout that's easy to review before interviews. All examples reference your actual experience with PolicyCenter 10.x, cloud migrations, and specific implementations you've worked on.
