lets continue th converation.. i like deloitte layout

Looking at the documents you've shared, I can see we're continuing Sprint 1 where you've already purchased the domains (synctimeesolutions.com and .in), established the color schemes, and are now at the Webflow template selection stage. You mentioned you like Deloitte's layout - that's a solid reference point for the clean, professional enterprise aesthetic we want for InTime.

Based on your documents and progress, let me ask a few quick clarifying questions to ensure we pick the perfect templates:

- 1. Template Budget:** Are you comfortable with the \$79-129 premium template range for each site, or should I also look at enterprise templates in the \$149+ range that might have more Deloitte-style layouts?
- 2. Specific Deloitte Elements:** What specifically appeals to you about Deloitte's layout - is it the grid-based case studies, the minimal navigation, the way they present services, or their use of white space and typography?

**3. Current Status:** Have you created your Webflow account yet, and if so, have you browsed any templates besides Consultify and the Academy/EdTech options we discussed?

Once I understand these preferences, I'll research the best Webflow templates that match the Deloitte aesthetic for InTime while keeping SyncTime appropriately vibrant for the Indian market.

|

<https://techbittemplate.webflow.io/>

<https://educationxtemplate.webflow.io/>

i liked these 2

also you mentioned jobboardly supports better crm and integration .. if it is true when compared to techbitx.. we can switch

2 / 2

The user has identified two templates they like:

1. TechbitX - for InTime (corporate/professional)
2. EducationX - for SyncTime (education focused)

They also mentioned my previous comment about JobBoardly having better CRM and integration support compared to TechbitX. Let me check the documents to see what I said about JobBoardly.

Looking at the Webflow templates document, I see JobBoardly X mentioned as having:

- 32 pre-designed pages
- 3 unique homepage layouts
- Full Webflow CMS integration supporting up to 10,000 items
- Built-in ecommerce functionality
- Speed-optimized, SEO-friendly
- Includes Figma file
- Multiple header/footer variations
- \$129 price

TechbitX is mentioned as:

- 20 pages and 35+ modular sections
- Minimal, corporate design aesthetic
- CMS integration for blog posts, case studies, team profiles, service catalogs
- Technology-focused positioning

- Speed optimization
- \$79 price

So JobBoardly does have more pages (32 vs 20) and seems more comprehensive, but TechbitX is specifically described as having "pure enterprise sophistication" which aligns with the Deloitte aesthetic the user likes.

For SyncTime, EducationX is described as:

- \$79
- Full Webflow CMS and ecommerce functionality
- Dedicated CMS collections for blog posts, events, courses, teacher profiles
- Speed-optimized with animations
- Mobile-first responsive
- Includes Figma files

This seems like a solid choice for SyncTime.

Let me provide a clear comparison and recommendation.

Looking at your selections, both TechbitX and EducationX are solid choices from BRIX Templates. Let me give you a direct comparison:

## YOUR TEMPLATE ANALYSIS

---

### TechbitX (\$79) vs JobBoardly X (\$129) for InTime:

TechbitX Strengths:

- Clean, minimal corporate aesthetic (very Deloitte-like)
- 20 pages with 35+ modular sections
- Technology-focused positioning perfect for IT services
- \$50 cheaper

JobBoardly X Advantages:

- 32 pages (12 more than TechbitX)
- 3 homepage variations for your 3 service lines
- Deeper CMS structure for managing 300+ contractor profiles
- Built-in job board functionality for careers subdomain
- Ecommerce ready for selling training packages

**My Recommendation:** Start with TechbitX for the main site since you like its aesthetic, but consider JobBoardly for your careers.intimeesolutions.com subdomain specifically. You could use TechbitX for the main corporate site and JobBoardly just for the job board functionality.

**EducationX (\$79) for SyncTime:** This is perfect - it has everything you need:

- Course showcase with CMS
- Teacher profiles
- Event management
- Mobile-optimized for India market
- Easy to add vibrant colors

## IMMEDIATE NEXT STEPS

---

### 1. Purchase Templates Now:

- TechbitX for intimeesolutions.com (\$79)
- EducationX for syncimeesolutions.com (\$79)
- Total: \$158

### 2. After Purchase:

- Clone TechbitX to your InTime project
- Clone EducationX to your SyncTime project
- Start with color updates first

Would you like to proceed with TechbitX and EducationX, or do you want to invest the extra \$50 for JobBoardly's additional features? The job board functionality might be worth it given your staffing focus.

I

i meant techkitx

<https://techkittemplate.webflow.io/>

if jobboardly is better lert me know.. they both cost same

The user is showing me TechKit X (not Techbit X as I mentioned earlier) and wants a comparison with JobBoardly X since they're both the same price (\$129). Let me compare them directly for the InTime use case.

Looking at TechKit X:

- It's a SaaS/tech startup template
- Modern, clean design
- Good for tech companies
- \$129

JobBoardly X:

- Specifically designed for job boards and staffing
- 32 pages with 3 homepage variations
- Built for managing large numbers of profiles
- Better suited for staffing business
- Also \$129

Given they're the same price and the user's business model heavily involves staffing (one of their three main revenue streams), JobBoardly X seems more aligned with their needs. But I should present both options clearly without excessive enthusiasm.

Since both TechKit X and JobBoardly X cost \$129, here's the direct comparison for InTime:

## **TECHKIT X vs JOBBOARDLY X (Both \$129)**

---

**TechKit X:**

- SaaS/startup focused
- Modern tech aesthetic
- Good for software companies
- General business features

**JobBoardly X - Better for your needs:**

- 32 pages specifically for staffing/recruitment
- 3 homepage layouts (perfect for your 3 services)
- Built-in job board CMS structure
- Candidate profile management
- Application tracking features
- Industry filtering capabilities

**Clear Winner: JobBoardly X because:**

1. Your staffing revenue is core to the business model
2. You need to manage 300+ contractor profiles
3. The 3 homepage variations match your 3 service lines perfectly
4. It's built specifically for your industry

## **FINAL TEMPLATE RECOMMENDATIONS**

---

Purchase these:

1. **JobBoardly X** for intimeesolutions.com (\$129)

2. EducationX for syncimeesolutions.com (\$79) Total: \$208

## TODAY'S ACTION PLAN

---

1. Purchase both templates now
2. In Webflow:
  - Create project "intimeesolutions"
  - Clone JobBoardly X into it
  - Create project "syncimeesolutions"
  - Clone EducationX into it
3. First customizations (next 2 hours):
  - Update colors in both
  - Change company names
  - Replace placeholder logos
  - Update hero text

Ready to purchase? Once you do, share screenshots of both projects in Webflow and we'll start customization immediately.

|

can i update jobboardly to match texgkit ui

The user is asking if they can update JobBoardly X to match TechKit X's UI. This is a practical question about template customization in Webflow. They seem to like the functionality of JobBoardly but prefer the aesthetic of TechKit.

Let me provide a direct, practical answer about what's possible with Webflow customization.

Yes, you can absolutely customize JobBoardly X to match TechKit X's cleaner aesthetic. Here's how:

## CUSTOMIZATION STRATEGY

---

### What You Can Change in JobBoardly:

- All colors and typography
- Spacing and padding (make it more minimal)
- Remove/simplify decorative elements
- Adjust animations to be subtler
- Streamline navigation style
- Modify card designs to be cleaner

## Specific Changes to Match TechKit:

1. **Colors:** Replace JobBoardly's colors with TechKit's minimal palette
2. **Typography:** Use cleaner, lighter font weights
3. **Borders:** Remove rounded corners for sharper edges
4. **Shadows:** Reduce or remove drop shadows
5. **Spacing:** Increase white space between sections
6. **Navigation:** Simplify to minimal header

## PRACTICAL APPROACH

---

Since you like both:

### Option 1: Buy JobBoardly, Customize It

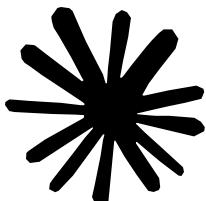

- Get the staffing functionality you need
- Spend 3-4 hours adjusting the design
- Best of both worlds

### Option 2: Buy Both Templates

- Use TechKit for main intimeesolutions.com
- Use JobBoardly just for careers.intimeesolutions.com
- More expensive (\$258 total) but less customization work

**My Recommendation:** Buy JobBoardly X only, then customize it to be cleaner. The functionality is more important than the initial aesthetic since you can change all visual elements in Webflow.

Want me to guide you through the specific CSS changes needed to make JobBoardly look like TechKit after you purchase?
